Our Capabilities

Business Intelligence and Data Management:

- Real-time-decision systems and data mining using
- Advanced Business Intelligence techniques
- High data volume online processing

Portals and Business Applications

- Advanced Business Design Techniques
- Human-Machine Interaction simulation Tool
- Proprietary e-learning platforms, with simulation capabilities
- Multi-channel data dissemination platforms
- Mobile applications developments
- GIS-Based Applications Development

Systems & Infrastructure:

- Communications and technical infrastructure design, implementation and management
- Concurrent Design and Maintenance Simulation Tools
- Monitoring and Alert Systems
- Large and complex systems integration
- Application Virtualization Proprietary tool
- Energy Management Systems

Road

Partner

The IRIS Platform (Integrated Resources Information Share)

The project objective is to put together different technologies, on a single platform, to be used by the overall logistics value chain:

- Intelligent Fleet Management
- Routes load balancing
- Goods and vehicles real-time track and trace
- Improved revenue sharing models
- Online Auctions
- Data Mining and prediction models
- Integrated Planning and management
